NOT RECOMMENDED FOR NEW DESIGNS NO RECOMMENDED REPLACEMENT

## Filterless High Efficiency 1.5W Class D Mono Amplifier

The ISL99201 is a fully integrated high efficiency class-D mono amplifier. It is designed to maximize performance for mobile phone applications. The application circuit requires a minimum requirement of external components and operates from a 2.4 V to 5.5 V input supply. It is capable of delivering 1.4 W of continuous output power with less than $1 \%$ THD+N driving a $8 \Omega$ load from a 5 V supply.

The ISL99201 features a high-efficiency, low-noise modulation scheme. It operates with $86 \%$ efficiency at 400 mW into $8 \Omega$ and has a signal-to-noise ratio (SNR) that is better than 95dB. The ISL99201 has a micro-power shutdown mode with a typical shutdown current of 200 nA . Shutdown is enabled by applying a logic low to the $\overline{\mathrm{SD}}$ pin.

The architecture of the devices allows it to achieve very low level of pop-and-click. This minimizes voltage glitches at the output during turn-on and turn-off, thus reducing audible noise on activation and deactivation.

The fully differential input of the ISL99201 provides excellent rejection of common mode noise on the input typically 75 dB . EMI suppression is achieved by SRC (Slew Rate Control).

The ISL99201 oscillator can be synchronized to an external clock through the SYNC input, allowing the switching frequency to be externally defined. The SYNC input also allows multiple ISL99201 to be cascaded and frequency locked; minimizing interference due to clock intermodulation.

The ISL99201 also has excellent rejection of power supply noise, including noise caused by GSM transmission bursts and RF rectification. PSRR is typically 75 dB at 217 Hz . There will be 4 versions of the part; they will consist of three fixed gain settings ( $6 \mathrm{~dB}, 9.6 \mathrm{~dB}, 12 \mathrm{~dB}$ ) and one user programmable gain setting (need external resistors).

The ISL99201 has built-in thermal shutdown and output short-circuit protection.

## Features

- Filterless class D with efficiency $>86 \%$ at 400 mW
- Click-pop suppression
- Slew rate control
- Spread spectrum switching
- Optional SYNC pin for master/slave operation without interface
- 1.4 W into $8 \Omega$ with less than $1 \%$ THD +N
- 2.4 V to 5.5 V single supply voltage
- Built-in resistors to reduce board component count
- Only one external component required (Fixed gain mode)
- Short circuit and thermal protection
- Gain programmable $6 \mathrm{~dB}, 9.6 \mathrm{~dB}, 12 \mathrm{~dB}$ and User programmable
- Pb-Free (RoHS compliant)

## Applications

- Mobile phones
- MP3 players
- Portable gaming
- Portable electronics
- Educational toys

NOTES:

1. Please refer to TB347or details on reel specifications.
2. These Intersil Pb-free plastic packaged products employ special Pb -free material sets, molding compounds/die attach materials, and $100 \%$ matte tin plate plus anneal (e3 termination finish, which is RoHS compliant and compatible with both SnPb and Pb -free soldering operations). Intersil Pb -free products are MSL classified at Pb -free peak reflow temperatures that meet or exceed the Pb -free requirements of IPC/JEDEC J STD-20.

## NOTES:

4. Limits established by Characterization and are not production tested
5. Parameters with MIN and/or MAX limits are $100 \%$ tested at $+25^{\circ} \mathrm{C}$, unless otherwise specified. Temperature limits established by characterization and are not production tested.

## Pin Descriptions

## SD

Shutdown Active Low. This signal is used to shut down and activate the part. It is 1.8 V to 5 V compatible. During shutdown, the part draws less than 100nA input current. Coming out of shutdown takes 3.5 ms and going into shutdown is instantaneous.

## SYNC

External clock input. This pin allows the chip to be synchronized to a system clock. This helps in folding the spectral components and the switching harmonic out of band of interest. The range of SYNC frequency is from 250 kHz to 800 kHz .

## IN+

Positive Differential Input.

IN-
Negative Differential Input.
$\mathrm{V}_{\mathrm{O}}{ }^{+}$
Positive BTL output.
GND
Ground.
$V_{D D}$
Power Supply.
$\mathrm{VO}^{-}$
Negative BTL output.

## Block Diagram (Notes)
